APV 电磁式夹管阀系列透过激磁线圈后会拉动可动铁心，达到开启或关闭管路，消磁激磁后将可使铁芯回到原本的位置，通电即开即关，有常开或常闭可供选择，针对用于对液体及气体流动控制。

其他类型的的二口阀因内部有微小通道，可能导致流体残留于内部，此夹管阀不具有任何多余空间使得流体残留于这区域，仅有管路内部会接触液体。此产品适用于药物配液、实验室装备、废水处理、医疗设备、化学、食品、饮料设备、陶瓷/玻璃/塑料、散装与固体处理等，须确保不让介质受到污染的产业上。

本产品皆符合 、、、 等认证。

APV electronic pinch valve is solenoid-operated pinch valve that is designed to open and close tubes for controlling flow of liquids and gases. Other valve types have internal dead volume that may cause small amounts of fluid to remain in the valve.

Pinch valves have no dead volume where fluid can become trapped. Only the inside of the tubing contacts the fluid. Energizing the solenoid retracts or attracts the plunger, which opens or closes the tube. De-energizing the solenoid will allow the plunger to return to its original state. Normally open and normally closed options are available.
